

Tutorial Session 8c Homework: Equivalent Stress

Mentor Guide Knowledge & Skills Questions

1.12 Define typical yield criteria for isotropic metals in a general 3D state of stress.

Numerical Questions

1) A thick pipe has inner and outer radii 10mm and 15mm respectively and is subject to an internal pressure of P . Show that the Mises stress on the inner and outer surfaces are respectively $3.12P$ and $1.39P$.

2) This pipe is also subject to a bending moment of 100 Nm, in the sense which gives a positive stress at the top. If the pressure is $P = 20$ MPa, calculate the Mises stress on the inner and outer surfaces at both the top and the bottom of the pipe.

3) In Qu.2, is it a coincidence that the Mises stress at the top and bottom of the pipe are the same?
